

PMW3901 Pattern Recommendations

Best Patterns for PMW3901:

1. Jittered Dot Grid - Best overall performance
 - Semi-regular spacing prevents repetition issues
 - High contrast dots are easy to track
 - Works well at various heights (10cm - 1m)
2. Random Circles - Excellent for varied lighting
 - Non-repetitive pattern
 - Good feature density
3. High Frequency Pattern - Maximum precision
 - Best for low altitude (< 30cm)
 - Dense features for fine movement detection

General Guidelines:

- Print Pattern: Use matte finish to avoid reflections
- Contrast: Black on white works best
- Avoid: Perfectly regular grids or repetitive patterns
- Scale: Features should be 3-20mm for optimal tracking
- Lighting: Ensure even illumination, avoid shadows
- Height: Sensor works best 10cm - 80cm above pattern

Jittered Dot Grid

Semi-regular dots with position variation - Optimal balance

Random Circles Pattern

High contrast, non-repetitive - Excellent tracking

Random Polygons Pattern

Variable shapes - Great feature tracking

Irregular Checkerboard

Variable sized squares - Good for orientation tracking

High Frequency Pattern

Dense random features - Maximum feature density

Organic Stone Pattern

Natural irregular shapes - Good outdoor simulation
